Addition et Soustractions de Fractions - Exercices

Effectue les opérations suivantes et rends les fractions irréductibles.

1. $\dfrac{-30}{21} - \dfrac{7}{5} - \dfrac{4}{7} =$

2. $\dfrac{-29}{14} + \dfrac{6}{8} + \dfrac{-2}{6} =$

3. $\dfrac{70}{45} + \dfrac{88}{112} =$

4. $\dfrac{9}{24} - \dfrac{11}{3} =$

5. $\dfrac{-12}{27} + \dfrac{-45}{21} =$

6. $\dfrac{20}{6} + \dfrac{8}{10} =$

7. $\dfrac{18}{30} + \dfrac{-7}{9} - \dfrac{10}{2} =$

8. $\dfrac{6}{2} + \dfrac{-1}{3} + \dfrac{3}{10} =$

9. $\dfrac{-48}{48} + \dfrac{9}{45} =$

10. $\dfrac{-13}{15} + \dfrac{-9}{5} =$

Addition et Soustractions de Fractions - Solutions

1. $\frac{-30}{21} - \frac{7}{5} - \frac{4}{7} = \frac{-10}{7} - \frac{7}{5} - \frac{4}{7} = \frac{-50 - 49 - 20}{35} = \frac{-119}{35} = \frac{-17}{5}$

2. $\frac{-29}{14} + \frac{6}{8} + \frac{-2}{6} = \frac{-29}{14} + \frac{3}{4} + \frac{-1}{3} = \frac{-174 + 63 + (-28)}{84} = \frac{-139}{84}$

3. $\frac{70}{45} + \frac{88}{112} = \frac{14}{9} + \frac{11}{14} = \frac{196}{126} + \frac{99}{126} = \frac{295}{126}$

4. $\frac{9}{24} - \frac{11}{3} = \frac{3}{8} - \frac{11}{3} = \frac{9}{24} - \frac{88}{24} = \frac{-79}{24}$

5. $\frac{-12}{27} + \frac{-45}{21} = \frac{-4}{9} + \frac{-15}{7} = \frac{-28}{63} + \frac{-135}{63} = \frac{-163}{63}$

6. $\frac{20}{6} + \frac{8}{10} = \frac{10}{3} + \frac{4}{5} = \frac{50}{15} + \frac{12}{15} = \frac{62}{15}$

7. $\frac{18}{30} + \frac{-7}{9} - \frac{10}{2} = \frac{3}{5} + \frac{-7}{9} - \frac{5}{1} = \frac{27 + (-35) - 225}{45} = \frac{-233}{45}$

8. $\frac{6}{2} + \frac{-1}{3} + \frac{3}{10} = \frac{3}{1} + \frac{-1}{3} + \frac{3}{10} = \frac{90 + (-10) + 9}{30} = \frac{89}{30}$

9. $\frac{-48}{48} + \frac{9}{45} = \frac{-1}{1} + \frac{1}{5} = \frac{-5}{5} + \frac{1}{5} = \frac{-4}{5}$

10. $\frac{-13}{15} + \frac{-9}{5} = \frac{-13}{15} + \frac{-27}{15} = \frac{-40}{15} = \frac{-8}{3}$
