

Division de fractions - Exercices

Effectue les divisions suivantes et rends les fractions irréductibles.

$$1 \quad \frac{-210}{196} : \frac{-9}{13} =$$

$$11 \quad -9 : \frac{12}{8} =$$

$$2 \quad \frac{8}{196} : \frac{4}{56} =$$

$$12 \quad \frac{-8}{114} : \frac{14}{209} =$$

$$3 \quad 2 : \frac{19}{14} =$$

$$13 \quad \frac{325}{11} : \frac{350}{7} =$$

$$4 \quad \frac{96}{11} : \frac{-84}{14} =$$

$$14 \quad \frac{-40}{30} : \frac{-8}{6} =$$

$$5 \quad \frac{-10}{184} : \frac{14}{46} =$$

$$15 \quad \frac{10}{255} : \frac{-6}{102} =$$

$$6 \quad 6 : \frac{7}{11} =$$

$$16 \quad -14 : \frac{-4}{7} =$$

$$7 \quad \frac{242}{14} : \frac{-198}{3} =$$

$$17 \quad \frac{-160}{2} : \frac{-160}{11} =$$

$$8 \quad \frac{-150}{150} : \frac{-3}{7} =$$

$$18 \quad -3 : \frac{19}{10} =$$

$$9 \quad \frac{72}{7} : \frac{72}{13} =$$

$$19 \quad \frac{-50}{30} : \frac{3}{4} =$$

$$10 \quad \frac{48}{64} : \frac{12}{14} =$$

$$20 \quad \frac{-7}{216} : \frac{-12}{336} =$$

Division de fractions - Solutions

$$1 \quad \frac{-210}{196} : \frac{-9}{13} = \frac{-210}{196} \cdot \frac{13}{-9} = \frac{-5}{14} \cdot \frac{-13}{3} = \frac{65}{42}$$

$$11 \quad -9 : \frac{12}{8} = -9 \cdot \frac{8}{12} = -9 \cdot \frac{-3}{1} \cdot \frac{2}{1} = -6$$

$$2 \quad \frac{8}{196} : \frac{4}{56} = \frac{8}{196} \cdot \frac{56}{4} = \frac{2}{7} \cdot \frac{2}{1} = \frac{4}{7}$$

$$12 \quad \frac{-8}{114} : \frac{14}{209} = \frac{-8}{114} \cdot \frac{209}{14} = \frac{-2}{3} \cdot \frac{11}{7} = \frac{-22}{21}$$

$$3 \quad 2 : \frac{19}{14} = 2 \cdot \frac{14}{19} = \frac{28}{19}$$

$$13 \quad \frac{325}{11} : \frac{350}{7} = \frac{325}{11} \cdot \frac{7}{350} = \frac{13}{11} \cdot \frac{1}{2} = \frac{13}{22}$$

$$4 \quad \frac{96}{11} : \frac{-84}{14} = \frac{96}{11} \cdot \frac{14}{-84} = \frac{16}{11} \cdot \frac{-1}{1} = \frac{-16}{11}$$

$$14 \quad \frac{-40}{30} : \frac{-8}{6} = \frac{-40}{30} \cdot \frac{6}{-8} = \frac{-4}{3} \cdot \frac{-1}{1} = 1$$

$$5 \quad \frac{-10}{184} : \frac{14}{46} = \frac{-10}{184} \cdot \frac{46}{14} = \frac{-5}{4} \cdot \frac{1}{7} = \frac{-5}{28}$$

$$15 \quad \frac{10}{255} : \frac{-6}{102} = \frac{10}{255} \cdot \frac{102}{-6} = \frac{2}{3} \cdot \frac{-1}{1} = \frac{-2}{3}$$

$$6 \quad 6 : \frac{7}{11} = 6 \cdot \frac{11}{7} = \frac{66}{7}$$

$$16 \quad -14 : \frac{-4}{7} = -14 \cdot \frac{7}{-4} = \frac{7}{1} \cdot \frac{-7}{2} = \frac{49}{2}$$

$$7 \quad \frac{242}{14} : \frac{-198}{3} = \frac{242}{14} \cdot \frac{3}{-198} = \frac{11}{7} \cdot \frac{-1}{6} = \frac{-11}{42}$$

$$17 \quad \frac{-160}{2} : \frac{-160}{11} = \frac{-160}{2} \cdot \frac{11}{-160} = \frac{11}{1} \cdot \frac{-1}{2} = \frac{11}{2}$$

$$8 \quad \frac{-150}{150} : \frac{-3}{7} = \frac{-150}{150} \cdot \frac{7}{-3} = \frac{-1}{1} \cdot \frac{-7}{3} = \frac{7}{3}$$

$$18 \quad -3 : \frac{19}{10} = -3 \cdot \frac{10}{19} = \frac{-30}{19}$$

$$9 \quad \frac{72}{7} : \frac{72}{13} = \frac{72}{7} \cdot \frac{13}{72} = \frac{13}{7} \cdot \frac{1}{1} = \frac{13}{7}$$

$$19 \quad \frac{-50}{30} : \frac{3}{4} = \frac{-50}{30} \cdot \frac{4}{3} = \frac{-5}{3} \cdot \frac{4}{3} = \frac{-20}{9}$$

$$10 \quad \frac{48}{64} : \frac{12}{14} = \frac{48}{64} \cdot \frac{14}{12} = \frac{1}{4} \cdot \frac{7}{2} = \frac{7}{8}$$

$$20 \quad \frac{-7}{216} : \frac{-12}{336} = \frac{-7}{216} \cdot \frac{336}{-12} = \frac{-7}{54} \cdot \frac{-7}{1} = \frac{49}{54}$$
